

ForgetMeNot Frequently Asked Questions

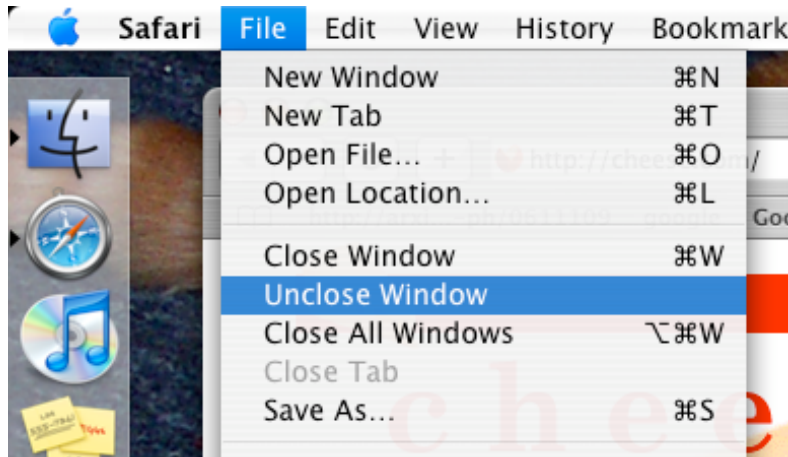

version 4.0

How do I install ForgetMeNot?

ForgetMeNot is a SIMBL plug-in; therefore, you must first install SIMBL. Once you have installed SIMBL, you can run the installer for ForgetMeNot.

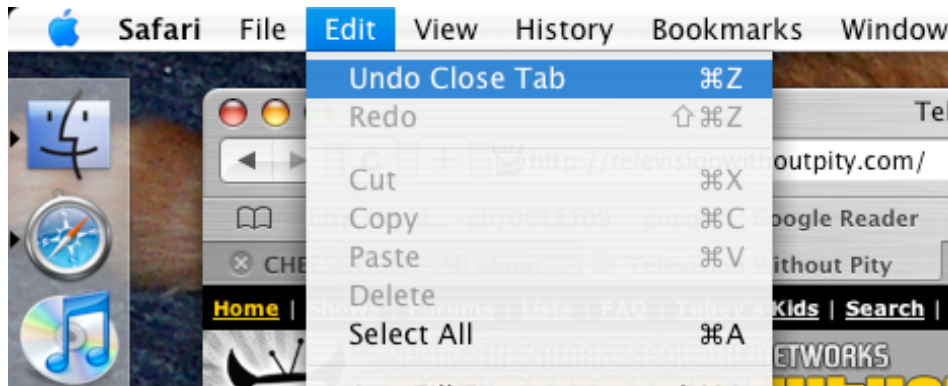

How do I get back a window that I accidentally closed?

It's easy! Just click "Unclose Window" on the File Menu.

How do get back a tab that I accidentally closed?

It's easy! Just click "Undo Close Tab" on the Edit Menu.

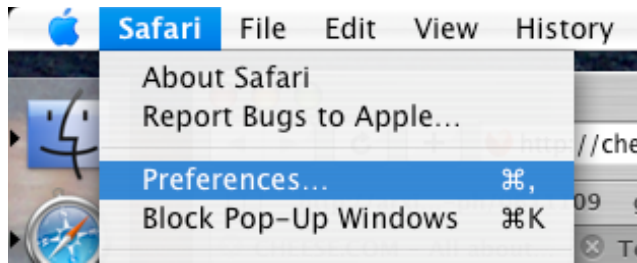

Why is one feature on the File menu, and another feature on the Edit menu?

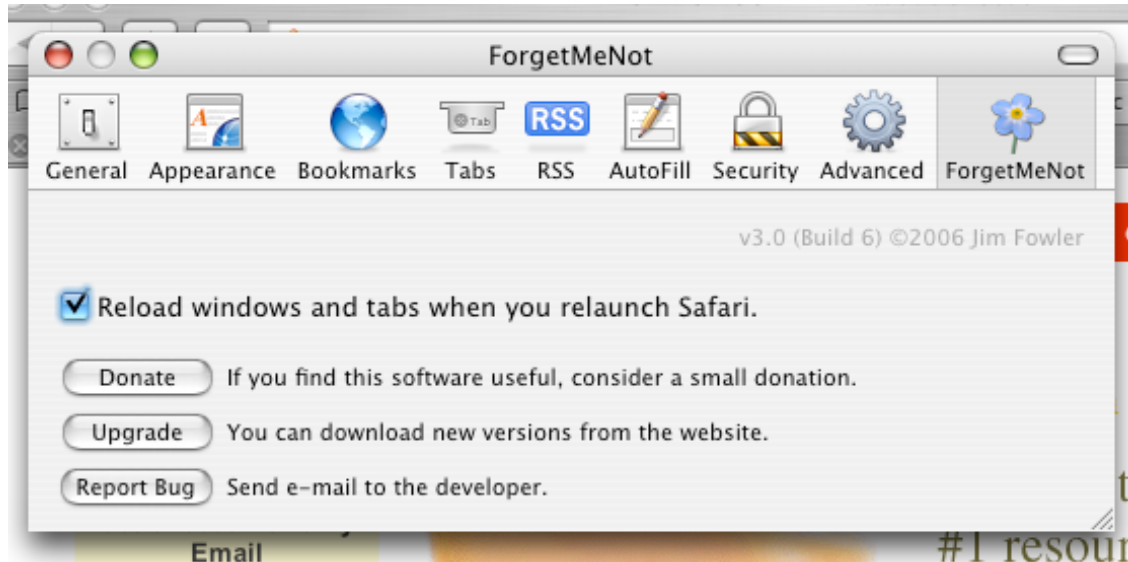

This inconsistency bothers me too. But "undo"ing is connected to the window you are working in; when you close a window, you can't undo anything from that window any longer, so "unclosing" doesn't make sense. Thus, I had to put "Unclose Window" on the file menu. After all, unclosing a window is more like reopening a file, and unclosing a tab is more like undoing a change to a particular document.

How do I prevent ForgetMeNot from reloading the windows I had open when I last closed Safari?

First go into your preferences:

Then click on the ForgetMeNot tab, and uncheck "Reload windows and tabs when you relaunch Safari."

How do I contact the author with a bug?

Please email me at jim@uchicago.edu

ForgetMeNot Changelog

Version 4.0: Added support for Safari 3; dropped support for previous versions of Safari.

Version 3.1: Updated French localization.
